

Practical Workshop 2

Kindly create a new Talend job to do the following:

- read the content of IMDB.csv file
- read the content of IMDB.xlsx file
- read the content of IMDB.json file
- merge the data collected from the above three files into a new dataset
- filter the records that has MetaCritic value as "NA"
- save the output as CSV
- build the Talend job, and make sure that you can run the exported scripts

Some notes:

- to can read excel file in Talend, you can depend on "File Excel" section from Metadata
- make sure that the output CSV file (the merged one) contains different 58 columns in any order

Please deliver the following:

- the exported files from building the Talend job
- also, right-click on the job → export items → and share with me
- screenshots of what you achieved
- the output CSV file
